Bug ID	BUG-001											
Module / Feature	(PMS) Admin Panel → Notifications											
Reported By	Ragu_Mani											
Reported On (Date)	17-Sep-2025											
Environment	QA Environment, Windows 10, Chrome v139.0.7258.138											
Severity	Medium											
Priority	P2 – High											
Title (Summary)	Notification menu shows empty on first click until sidebar notifications are accessed											
Description	When clicking the notification icon on the top-right corner of the Admin Panel, no notification	ations are displayed initially. However, after selecting the Notifications button from the sidebar, no	ifications appear,	and then the top-	right notification n	nenu also starts displaying them. The	his creates incons	istency and confusion	n for users expecting in	mmediate access to notific	ations from the top I	bar.
Steps to Reproduce	Login to the Admin Panel. Click on the Notification icon in the top-right corner. Observe that no notifications are displayed. Open the Notifications menu from the sidebar. Recheck the top-right notification menu → notifications are now visible.											
Expected Result	Clicking the top-right notification icon should immediately display all available notification	ns without needing to open the sidebar first.										
Actual Result	Top-right notification icon shows no notifications until the sidebar notifications are access	sed.										
Attachments	Solvent Solven Solvent Solvent Solvent Solvent Solvent Solvent Solvent Solvent	The contract of the contract o										
Status	New											
Comments	This looks like a data loading issue — notifications are only being fetched/initialized after	er accessing the sidebar menu. Needs fix to auto-fetch notifications on first load of top-right menu.

Title (Summary)	Image upload fails and the uploaded image is not displayed in the property profile											
Description		age "Image upload failed". Even after attempting to upload an image, the system does not display	the image in the	property profile. T	This prevents prop	per visualization of the property and	affects the user e	experience.				
Steps to Reproduce	Login to the Admin Panel. Navigate to Properties — Add Property. Attempt to upload a profile image. Observe that the system shows the error message "Upload failed" but Image uploaded is Save and check the property profile — uploaded image is not displayed.	image upload element.										
Expected Result	The image should upload successfully without errors. Once uploaded, the image should be displayed in the property profile immediately.											
	once appeaded, and image anound be displayed in the property profile infinediately.											

Actual Result	Error message displayed: "Upload failed". Uploaded image does not appear in the property profile.

Status	New New								
Comments	This may be caused by issues in file size validation, file path/storage configuration, or API endpoint handling for image uploads. Needs developer investigation.								
Field	Details / Example								
Bug ID	BUG-003								
Module / Feature									
Reported By	Properties → Add Property → Owner Details → Phone Number Field Ragu Mani								
Reported On (Date)	17/09/2025								
Environment	QA Environment, Windows 10, Chrome v139,0.7258.138								
Severity	Medium Medium								
Priority	High								
Title (Summary)	Phone number field accepts invalid inputs (less/more than 10 digits)								
Description	the Add Properties \rightarrow Owner Details form, the Phone Number field is not validating input length property. It allows users to enter phone numbers with fewer than 10 digits or more than 10 digits, which results in invalid mobile numbers being accepted. This can lead to incorrect owner data being stored in the system.								
Steps to Reproduce	Login to the Admin Panel. Navigate to Properties — Add Property. Enter owner details in the Phone Number field. Input a phone number with: Less than 10 digits (e.g., 98765). More than 10 digits (e.g., 9876543210123). Observe that the system accepts both invalid numbers without any validation error.								
Expected Result	The Phone Number field should accept only valid 10-digit numeric values. Any input less or more than 10 digits should be restricted and display a validation error message (e.g., "Please enter a valid phone number").								
Actual Result	The Phone Number field accepts invalid inputs with less than or more than 10 digits without showing any error.								
Attachments									
Status	New								
Comments	Needs input validation fix at both UI (frontend validation) and backend (API validation) to ensure only valid 10-digit mobile numbers are accepted.

Bug ID	BUG-004								
Module / Feature	Properties → Add Property (Property Type: Land)								
Reported By	Ragu_Mani								
Reported On (Date)	17/09/2025								
Environment	QA Environment, Windows 10, Chrome v139.0.7258.138								

Severity										
	High									
Priority	High									
Title (Summary)	Created Land property not displayed in Properties list									
Description		successful, but the newly created property is not reflected in the Properties page. This causes missin	records and prev	vents users from m	anaging or tracking	g Land-type proper	ties.			
Steps to Reproduce	Login to the Admin Panel. Navigate to Properties — Add Property. Enter all required details and select Property Type = "Land". Save the property. Navigate to the Properties list page. Observe that the created property is not displayed.									
Expected Result	After creating a property of type Land, it should be immediately displayed in the Pro	perties list page along with other property types.								
Actual Result	The created property of type Land is not reflected in the Properties list page, even	hough the expelies four shows as agree								
Attachments	The decision property of type can be shown as a second of the property of type can be	nough the creation now shows it denotes.								
Status	New									
Comments	This may be due to a filtering issue on the Properties list page or a database mapp	ng issue where Land-type properties are not being retrieved correctly.

Bug ID	BUG-006												
Module / Feature													
	Properties → Properties Page → Property Type Dropdown												
Reported By	Ragu_Mani												
Reported On (Date)	17/09/2025												
Environment	QA Environment, Windows 10, Chrome v139.0.7258.138												
Severity	High												
Priority	Medium												
Title (Summary)	Land properties not displayed when selecting Land option in dropdown												
Description													
	On the Properties page, the property type dropdown works correctly for Apartment	and Commercial, showing the count and details of available properties. However, when selecting Lan	d, no details are o	lisplayed even tho	ugh Land-type pro	perties exist in the	system. This lea	ds to incomplete	property visibility	for users.			
Steps to Reproduce	Login to the Admin Panel. Navigate to the Properties page. Open the Property Type dropdown. Select Apartment — available apartments are displayed. Select Commercial — available commercials are displayed. Select Land — no details are shown, even though Land properties have been created.	sted.											
Expected Result	Selecting Land in the dropdown should display all available Land properties, similar to how Apartments and Commercials are shown.												
Actual Result	Selecting Land in the dropdown shows no results, even though Land properties ex	ist in the system											
Attachments	Security and in the organization of the control of	us ni viro systemi.											
Status	New												
Comments	This may be due to a filtering or data binding issue. Land properties not mapped correctly in the database query. API response not including Land type. Frontend filter not handling "Land" option properly.

Title (Summary)	Rent Due Date not displayed in tenant details after creation
Description	When creating a tenant with Tenant Type = Rent, the Rent Due Date field is entered during the creation process. However, after saving the tenant and viewing their details, the Rent Due Date is missing/not displayed. This results in incomplete tenant records and prevents accurate rent tracking.
Sleps to Reproduce	Login to the Admin Panel. Navigate to Tenants Add Tenant. Fill in all required details and select Tenant Type = Rent. Enter a valid Rent Due Date. Save the tenant. Navigate to the Tenant Details page and check the saved details.
Expected Result	The Rent Due Date entered during tenant creation should be displayed correctly in the tenant's details page.
Actual Result	The Rent Due Date is missing in the tenant details page after creation.

Title (Summary)	Tenant can be created updated without entering Monthly Rent (mandatory field bypassed)
Description	In the Add Tenant page, the Monthly Rent field is marked as mandatory. However, tenants can be created or updated without entering any value in this field. The system allows saving the tenant record, which results in incomplete and invalid tenant data.
Sleps to Reproduce	Login to the Admin Panel. Navigate to Tenants — Add Tenant: Fill in all required details except Monthly Rent. Save the tenant record. Observe that the tenant is created/updated successfully even though Monthly Rent is empty.
Expected Result	The system should not allow lenant creation or update without entering a value in the Monthly Rent field. A validation error message should be displayed (e.g., "Monthly Rent is required").
Actual Result	Tenant is created/updated successfully without entering any value in the Monthly Rent field.

Title (Summary)	Rows per page = 5 splits records incorrectly (2 on first page, 3 on second page)
	On the Tenant list page, when filtering tenants by Type = Rent (total 5 tenants available) and selecting Rows per page = 5, the records are not displayed correctly. Instead of showing all 5 tenants on a single page, the system displays:
Description	First page → 2 tenants
	Second page → 3 tenants
	However, when selecting Rows per page = 10 or 15, pagination works correctly and shows records as expected.

	Login to the Admin Panel.
	Navigate to Tenants Tenant List.
	Use the dropdown filter and select Type = Rent (ensure 5 records are available),
Steps to Reproduce	Scroil to the bottom and set Rows per page = 5.
	Observe that:
	Page 1 shows 2 tenants.
	Page 2 shows 3 tenants.
Expected Result	Change Rows per page = 10 or 15 all records are displayed correctly on one page.
Actual Result	When selecting Rows per page = 5, all 5 tenant records should be displayed on a single page without splitting into two pages. Rows per page = 5 splits the data incorrectly into 2 on first page and 3 on second page.

Title (Summary)	Land Add/Update form accepts invalid Mobile Number and Email ID values
Description	In the Add Land and Update Land forms, the Mobile Number and Email ID fields allow invalid inputs. The Mobile Number field accepts: Numbers greater than 10 digits Numbers less than 10 digits Alphabets Special characters The Email ID field also accepts invalid email formats (e.g., missing '@', missing domain, plain text). This results in poor data quality and incorrect records in the system.
Steps to Reproduce	Login to the Admin Panel. Navigate to Properties → Land. Click Add Land (or edit an existing Land). In the Mobile Number field, enter: A number > 10 digits A number < 10 digits A purble < 10 digits Alphabets or special characters → All are accepted. In the Email D field, enter: Invalid formats like abc.com, abc@, 12345, etc. → All are accepted without validation errors. Save the record.
Expected Result	Mobile Number should strictly accept exactly 10 digits only (no letters, special characters, or fewer/more digits). Email field should validate proper email format (e.g., username@domain.com).
Actual Result	Mobile Number field accepts invalid numbers, alphabets, and special characters.
Attachments	Email D field accepts would formats without validation.
Status	New
Comments	This is a critical validation issue and affects data integrity. Needs input validation rules applied for both Mobile Number and Email ID fields on Add & Update forms.

Title (Summary)	Unable to upload image and invalid phone number validation in Settings page
	In the Settings page, two major issues were observed:
	Image Upload:
	User is able to select an image from local storage, but upload fails with an "Upload failed" message.
	The image is not saved or displayed in the settings/profile section.
	Phone Number Field Validation:
Description	Phone number field accepts invalid inputs including:
	Empty values
	Numbers less than 10 digits
	Numbers greater than 10 digits
	Alphabets
	Special characters
	This leads to failed profile customization and poor data quality in the system.
	Login to the Admin Panel.
	Navigale to Settings page.
	Try to upload an image — observe Upload Error.
	Enter invalid values in Phone Number field:
Steps to Reproduce	Eine wrau vaues in note varioe in eta.
	5 digits
	12 digits
	Letters or symbols
	→ All are accepted.
	Save the settings.
	Image should upload successfully and be displayed.
Expected Result	
	Phone number field should only accept exactly 10 digits numeric values.
Actual Result	Image upload fails with error message.
	Phone number field accepts invalid data (empty, too short, too long, alphabets, special characters).
